SUMMARY

Python Backend Developer with 1 year of experience building backend systems for FaceViz, a production workforce management platform (Django, DRF, PostgreSQL) live across 20+ client organizations — covering attendance, geofencing, payroll, tasks, tickets, leave, and expenses. Also designed and built a production CCTV face-recognition attendance pipeline (InsightFace/SCRFD, ONNX Runtime) that runs on resource-constrained servers with retry handling, deduplication, and S3-backed storage. Comfortable owning a module end-to-end — API design, database schema, and production reliability — in an Agile team.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, HTML, CSS

Backend: Django, Django REST Framework, Flask, REST API design, role-based access control, JWT authentication

Databases: PostgreSQL, MySQL, SQLite — schema design, query optimization

AI / Computer Vision: OpenCV, InsightFace, SCRFD, ONNX Runtime, face detection/tracking, image enhancement, RTSP/CCTV ingestion, Mediapipe.

Infra & Tooling: DigitalOcean Spaces (S3), multithreading, cron jobs, Streamlit, Git/GitHub, Postman, Bruno

Frontend: React.js, TypeScript, Vite, Tailwind CSS, Bootstrap

Practice: production debugging, GPS/geofencing systems

PROFESSIONAL EXPERIENCE

Python Backend Developer — Datamoo.ai Oct 2025 – Present

FaceViz — Workforce Management & Employee Operations Platform (Production, 20+ client organizations)

- Built backend modules in Django/DRF for a workforce platform used by 20+ client organizations, covering attendance, location/geofencing, payroll, tasks, timesheets, tickets, leave, and expenses — replacing manual registers, spreadsheets, and disconnected tools.
- Developed the Smart Attendance module: face-verified punch in/out with location validation, geofence-exception flagging, working-hours calculation, missed-punch tracking, and regularization workflows.
- Built the location & geofencing system — admin-defined work/client sites, live punch-location tracking, and trip/travel-route monitoring for field teams.
- Built the payroll module: salary configuration, earnings/deductions, work codes, payroll processing, and payslip generation, using attendance/leave data as calculation inputs.
- Built task, ticketing, leave/holiday, and expense modules with approval workflows, plus role-based dashboards for employees, managers, and admins.

CCTV Face Recognition & Attendance Pipeline — personally designed and built the processing architecture

- Designed and optimized a 3-stage CCTV processing pipeline (capture → detect/track → enhance/upload) using InsightFace/SCRFD and ONNX Runtime, tuned to run on 4 vCPU / 8GB servers.
- Implemented face quality checks, duplicate detection, automatic cropping, and image enhancement before async upload to the FaceViz attendance API.
- Integrated DigitalOcean Spaces (S3) for image storage with automated retention cleanup, API retry handling, and resource monitoring for pipeline reliability.
- Automated recurring internal workflows and operational reporting using Python cron jobs and Streamlit dashboards.

PROJECTS

CartGenius — Full-Stack E-Commerce App — React (Vite) + Django e-commerce app with JWT auth and cart management, built against FakeStoreAPI for product data.

Tech: React.js, Django, MySQL — luxcard.vercel.app

Translator Pro — Web Translation App — Flask backend with MongoDB serving a multi-language text translation tool, deployed on Render.

Tech: Flask, MongoDB — translatorpro.onrender.com

EDUCATION & CERTIFICATIONS

Bachelor of Computer Applications (BCA) Aug 2021 – Jun 2024

Agurchand Manmull Jain College, Chennai, Tamil Nadu — CGPA 8.05/10

- Full Stack Python — Besant Technologies (Python, SQL, HTML, CSS, Bootstrap, JavaScript, React.js)
